DEPARTMENT OF SOFTWARE ENGINEERING
Faculty of Computing & Information Technology (FCIT)
University of the Punjab, Lahore – PAKISTAN

# FYDP-DSE D1 template

## Agile: Product Backlog & Definition of Done template

[Project GID & title]

***Bachelors of Science in Software Engineering (2023-2027)***

**By**

Student Name 1 BSEF23Mxxx

Student Name 2 BSEF23Mxxx

Student Name 3 BSEF23Mxxx

Student Name 4 BSEF23Mxxx

**Supervised by:**

Primary supervisor's name,
Primary supervisor's designation

Co-supervisor's name,
Co-supervisor's designation

**FACULTY OF COMPUTING AND INFORMATION TECHNOLOGY, UNIVERSITY OF THE PUNJAB, LAHORE.**

## Contents

1. Product Overview ..... 2
2. System Design (High-Level) ..... 2
3. Features & Scope ..... 3
4. Product Backlog ..... 3
5. Prototype Demonstration ..... 4
6. Progress Snapshot ..... 4
7. Definition of Done (DoD) ..... 5
8. Development Approach ..... 5
9. CI/CD Plan (Brief) ..... 5
10. Next Steps (Semester 8) ..... 5

## 1. Product Overview

*Briefly explain what your system is, who it is for, and why it matters.*

- **Problem:** What issue are you solving?
  *Example:* Manual attendance systems are time-consuming and prone to errors.
- **Target Users:** Who will use your system?
  *Example:* University teachers and students.
- **Solution:** What does your system do?
  *Example:* A web-based system that automates attendance using facial recognition.

## 2. System Design (High-Level)

*Give a simple overview of your system structure. Keep it short; diagrams are recommended.*

- **Architecture Type:**

  *Example:* Web-based application using MVC architecture
- **Main Components:**
  - Frontend (UI)
  - Backend (APIs & logic)
  - Database

- **Tech Stack:**
    - Frontend: *React / HTML-CSS*
    - Backend: *Node.js / Django*
    - Database: *MongoDB / MySQL*

## 3. Features & Scope

*List main system features and clearly define what is included in D1.*

**Core Features (Epics)**

*Example:*

- User Management
- Attendance Module
- Reporting System

## D1 Scope

*Mention what is ready for demo.*

- **Implemented:**
  *Example:* Login UI, basic dashboard
- **Partially Implemented:**

  *Example:* Attendance marking logic
- **Planned:**
  *Example:* Report generation, analytics

## 4. Product Backlog

*Write user stories from user perspective with priority.*

| Priority | User Story |
|---|---|
| Must | As a user, I want to log in securely |

| | |
|---|---|
| Must | As a teacher, I want to mark attendance |
| Should | As an admin, I want to view reports |
| Could | As a user, I want dark mode |

## 5. Prototype Demonstration

*Explain what your prototype shows — this is key for evaluation.*

- **What is implemented:**
  *Example:* Login page, dashboard UI, navigation flow
- **What is partially working:**
  *Example:* Attendance button works but no database storage
- **What is not implemented yet:**
  *Example:* Face recognition integration
- **Tools Used (optional):**
  *Example:* Figma for UI design, React for frontend

## 6. Progress Snapshot

*Show that actual work has been done.*

- **Git Repository:**
  *Example:* https://github.com/yourproject
- **Current Status:**
  - Project setup completed ✓
  - Prototype developed ✓
  - Initial coding started ✓
- **Build Status:**
  *Example:* Application runs locally with basic functionality

## 7. Definition of Done (DoD)

*Define when a feature is considered complete.*

✓ Code committed to repository
✓ Feature works at basic level
✓ No major runtime errors
✓ Ready for demo

## 8. Development Approach

*Explain how your team works using Git.*

- **Branching Strategy:**
  - main → stable version
  - develop → working version
  - feature/<name> → new features
- **Workflow:**
  *Example:* Develop feature → commit → create pull request → merge

## 9. CI/CD Plan (Brief)

*Mention your automation plan (even if not fully implemented).*

- Code builds automatically on push
- Basic testing planned
- Deployment planned in next phase

*Example Tool:* Jenkins / GitHub Actions

## 10. Next Steps (Semester 8)

*Show clear direction forward.*

- Complete backend development
- Integrate frontend with backend

- Perform testing
- Deploy application
